

SafeStart

SafeStart is a consultancy process that ensures all deployment of IT is 'fit for purpose' in terms of people and technology – and that time and money is not wasted on things that don't work!

Proposed options are **tested** and **ratified** by a **proof of concept** procedure, from which a **roadmap** to final deployment is produced. **SafeStart** ensures deployment of IT follows agreed strategy, meets expectations and provides clear and **focused benefits** for your business!

SafeStart is made up of the following parts.

1. Capture details of existing facilities & services.
2. Strategy workshop. Identify drivers, goals, objectives and establish requirements.
3. Review of options. Hardware, software and training.
4. Agree roadmap creation.
5. Report generation.

SafeStart can be undertaken in one continuous engagement or spread over a period of time to suit scalability and convenience. It is both cost effective and time efficient!

Waxtie has an enviable reputation as **industry specialists** in large scale optimized infrastructure design and desktop deployment of new operating systems. We use both ITIL and TOGAF best industry practices alongside **SafeStart** to ensure solutions are not only delivered on time and efficiently but that the process also minimises customer interruptions and maximises workflow benefits.
